

6.0 Implementation/Migration from MAGIC

Several GRA consultants were involved in one of Canada's first MEDITECH 6.0 implementations. As a mature MEDITECH MAGIC site, the organization chose to implement 6.0 as part of their ongoing strategic plan. During the nine months of implementation, GRA consultants worked closely with hospital staff in the areas of laboratory, nursing documentation, order management, health records, finance and project management to ensure that successful implementation was accomplished on time. This included all aspects of team building, dictionary development, process re-engineering, report writing and training. Successful transition to hospital staff was achieved at the end of the project.
