

Budget and ESM Implementation

GRA was engaged to implement a World Software Inc. Budget and ESM drill-down reporting system using MEDITECH data inputs. GRA provided financial and NPR MEDITECH support to the finance team and all other related project teams. Throughout the project, GRA helped create custom reports for the financial modules to meet the defined users' needs. GRA's consultant used his multi-systems' experience to populate a new reporting system in a very short project time line. The project was completed on time and GRA's involvement facilitated a far more detailed system and higher user functionality.
