

Clinical Modules Support

GRA was engaged to ensure skilled applications coverage during a NUR implementation project resulting in a smooth transition and effective knowledge transfer to the in-house team. The GRA consultant worked closely with a range of multi-disciplinary teams and provided support to the LAB and DI during the NUR/EDM implementation, assisting with any NUR tasks beyond a team's knowledge. GRA's total time on-site for both implementations was approximately 18 months. The consultant's strong project management skills resulted in both modules being successfully implemented while providing uninterrupted support to the other departments. His knowledge of the LAB and RAD modules allowed for many improvements to be made that were not previously built into the system. This resulted in both systems evolving into a more dynamic and user-centric product than would have normally been available during a new implementation.
