

## **MEDITECH Nursing (NUR) Implementation and Support**

GRA ensured there was skilled applications coverage during a NUR implementation project resulting in a smooth transition and effective knowledge transfer to the in-house team. This was done during the testing and implementation of a MEDITECH 5.63 upgrade. The GRA consultant's breadth of knowledge was a key component in the success of this project as she worked closely with a range of multi-disciplinary teams. She provided support to the nursing units and tested and implemented the new enhancements, and was able to assist with any NUR tasks beyond the team's knowledge. The GRA consultant successfully tested all DTS's for MEDITECH's Order Entry, Nursing and Physician Order Management modules. She worked closely with MEDITECH to ensure that issues identified were resolved in advance of the live date; consulted with in-house staff on the impacts and training needs of new features; and assisted in the planning of the implementation of these features.
