

Physician Portal Implementation

GRA coordinated the implementation of a physician portal to physicians including the validation and testing of the data. GRA's consultant liaised with the consultants and programmers of the portal product to ensure that the data displayed in the portal correlated with the display of the actual information in MEDITECH. GRA gathered information as to how the site would like to have the data formatted and then worked with the company to ensure that it met the needs of the customers. The consultant created a staff user guide and worked with in-house staff to ensure that training was consistent.
